## PROJECTS

### AMAZON CLONE WEB PAGE

- Creating an Amazon clone project using just HTML and CSS is a great way to learn the basics of web development. By replicating the layout and styling of Amazon's website, you can understand how to structure content and apply styles to create a visually appealing and functional e-commerce interface.

### PATIENT MANAGEMENT SYSTEM

- This system contains a modern, modular healthcare solution built with **Java Spring Boot** for the backend and a responsive **HTML/CSS/JS** frontend. The system is organized into several **microservices** and shared modules, each with clear responsibility.

### WEATHER APP

- Developed the backend of a weather application using Python, leveraging the **OpenWeatherMap** API to fetch real-time weather data. The backend handles requests for current weather conditions for all the cities around the world, with built-in error handling for invalid inputs and API issues.
